Describe Azure Active Directory Benefits and Features

Describe Azure AD Concepts

Compare AD DS to Azure Active Directory

Select Azure Active Directory Editions

Implement Azure AD Join

Implement Self-Service Password Reset

Summary and Resources

Describe Azure Active Directory Benefits and Features

A cloud-based suite of identity management capabilities that enables you to securely manage access to Azure services and resources for your users

Provides application management, authentication, device management, and hybrid identity

Describe Azure AD Concepts

Concept	Description
Identity	An object that can be authenticated
Account	An identity that has data associated with it
Azure AD account	An identity created through Azure AD or another Microsoft cloud service
Azure AD tenant/directory	A dedicated and trusted instance of Azure AD, a Tenant is automatically created when your organization signs up for a Microsoft cloud service subscription • Additional instances of Azure AD can be created • Azure AD is the underlying product providing the identity service • The term <i>Tenant</i> means a single instance of Azure AD representing a single organization • The terms <i>Tenant</i> and <i>Directory</i> are often used interchangeably
Azure subscription	Used to pay for Azure cloud services

Compare AD DS to Azure Active Directory

Azure AD is primarily an identity solution, and designed for HTTP and HTTPS communications

Queried using the REST API over HTTP and HTTPS. Instead of LDAP

Uses HTTP and HTTPS protocols such as SAML, WS-Federation, and OpenID Connect for authentication (and OAuth for authorization). Instead of Kerberos

Includes federation services, and many third-party services (such as Facebook)

Azure AD users and groups are created in a flat structure, and there are no Organizational Units (OUs) or Group Policy Objects (GPOs)

Select Azure Active Directory Editions

Feature	Free	Microsoft 365 Apps	Premium P1	Premium P2
Directory Objects	500,000 objects	No object limit	No object limit	No object limit
Single Sign-On	Unlimited	Unlimited	Unlimited	Unlimited
Core Identity and Access	X	X	X	X
B2B Collaboration	X	X	X	X
Identity & Access for O365		X	X	X
Premium Features			X	X
Hybrid Identities			X	X
Advanced Group Access			X	X
Conditional Access			X	X
Identity Protection				X
Identity Governance				X

Implement Azure AD Join

Single-Sign-On to your Azure managed SaaS apps and services

Enterprise state roaming of user settings across joined devices

Access to Microsoft Store for Business

Windows Hello support

Restriction of access to apps from only compliant devices

Seamless access to on-premises resources

Implement Self-Service Password Reset

1. Determine who can use self-service password reset

2. Choose the number of authentication methods required and the methods available (email, phone, questions)

3. You can require users to register for SSPR (same process as MFA)

Password reset - Authentication methods
mitaric (Default Directory) - Azure Active Directory

[All users](#)
[Deleted users](#)
[Password reset](#)
[User settings](#)
[Diagnose and solve problems](#)

Name	User principal name	↑↓	User type	Directory synced
 Retail Crisis Notifications	 @microsoft.com		Member	Yes
 Rumon Sinha	 @microsoft.onmicrosoft.com		Guest	No
 Momir Radojkovic	 @microsoft.onmicrosoft.com		Guest	No
 Mika Robertson	 @microsoft.onmicrosoft.com		Member	No

All users must have an account

The account is used for authentication and authorization

Each user account has additional properties

Manage User Accounts

New user

New guest user

Bulk create

Bulk invite

Bulk delete

Download users

Refresh

Reset password

Multi-Factor Authentication

New user

Microsoft

Create user

Create a new user in your organization. This user will have a user name like `alice@Microsoft.onmicrosoft.com`.

I want to create users in bulk

Invite user

Invite a new guest user to collaborate with your organization. The user will be emailed an invitation they can accept in order to begin collaborating.

I want to invite guest users in bulk

Must be Global Administrator or User Administrator to manage users

User profile (picture, job, contact info) is optional

Deleted users can be restored for 30 days

Sign in and audit log information is available

© Copyright Microsoft Corporation. All rights reserved.

Create Bulk User Accounts

The screenshot shows the Azure AD portal interface for managing users. The 'Bulk create user' modal is open on the right, displaying a three-step process: 1. Download csv template (optional), 2. Edit your csv file, and 3. Upload your csv file. The 'Download' button in step 1 is highlighted with a red box. The main page shows a list of users with columns for NAME, USER NAME, and USER TYPE. The 'Bulk create' button in the top navigation bar is also highlighted with a red box.

NAME	USER NAME	USER TYPE
AB a brenner	brenner@hotmail.com	Member
AP AAD Premium	aadpremium@outlook.com	Member

Azure AD supports bulk user create, delete, and list

Create the comma-separated values (CSV) template you can download from the Portal

Must be signed in as a Global administrator or User administrator

Create Group Accounts

 Search groups

+ Add filters

	Name	↑↓	Group Type	Membership Type
☐	MA Managers		Security	Assigned
☐	VM Virtual Machine Administrators		Security	Assigned
☐	VN Virtual Network Administrators		Security	Assigned

Group Types

- Security groups
- Microsoft 365 groups

Assignment Types

- Assigned
- Dynamic User
- Dynamic Device (Security groups only)

Create Administrative Units

Create an administrative unit

Populate the administrative unit with Azure AD users or groups

Create a role with appropriate permissions scoped to the administrative unit

Add IT members to the role

Azure AD Premium P1 or P2 for each Privileged Role Administrator or Global Administrator

Demonstration – Users and Groups

Determine domain information

Explore user accounts

Explore group accounts

Explore PowerShell for group management

Manage users and groups in Azure Active Directory

Lesson 03: Module 01 Lab

Lab 01 – Manage Azure Active Directory Identities

Lab scenario

In order to allow Contoso users to authenticate by using Azure AD, you have been tasked with provisioning users and group accounts. Membership of the groups should be updated automatically based on the user job titles. You also need to create a test Azure AD tenant with a test user account and grant that account limited permissions to resources in the Contoso Azure subscription.

Objectives

Task 1:

Create and configure
Azure AD users

Task 2:

Create Azure AD
groups with assigned
and dynamic
membership

Task 3:

Create an Azure
Active Directory (AD)
tenant

Task 4:

Manage Azure AD
guest users
